

## 1.10 mkdir command

We can create new directories using mkdir command. For our example we will create a code directory inside our home directory.

```
[Nubeera@laptop ~]$ ls
Desktop Documents Downloads Music Pictures Public Templates Videos
[Nubeera@laptop ~]$ mkdir code
[Nubeera@laptop ~]$ ls
Code      Desktop  Documents Downloads Music    Pictures Public  Templates
Videos
```

We can also create nested directories in a single command using the -p option.

```
[Nubeera@laptop ~]$ mkdir -p dir1/dir2/dir3
[Nubeera@laptop ~]$ ls dir1/ dir2/dir3/
dir1/:
dir2
dir3
```
