

1.10 mkdir command

We can create new directories using mkdir command. For our example we will create a code directory inside our home directory.

[Nubeera@laptop ~]\$ Is

Desktop Documents Downloads Music Pictures Public Templates Videos

[Nubeera@laptop ~]\$ mkdir code

[Nubeera@laptop ~]\$ Is

Code Desktop Documents Downloads Music Pictures Public Templates

Videos

We can also create nested directories in a single command using the -p option.

[Nubeera@laptop ~]\$ mkdir -p dir1/dir2/dir3

[Nubeera@laptop ~]\$ Is dir1/ dir2/dir3/

dir1/:

dir2

dir3
