

## 1.12 Copying a file using cp command

We use the cp command to copy a file in the Linux shell. To copy a folder with its contents recursively use the cp command with the -r flag. We use the cp file\_to\_copy new\_location format. In the example below, we are copying the hello.txt to hello2.txt.

\$ cp hello.txt hello2.txt

\$ Is -I

-rw-rw-r--. 1 fedora fedora 75 Jun 25 04:47 hello2.txt

-rw-rw-r--. 1 fedora fedora 75 Jun 25 04:33 hello.txt

In another example, I will copy the file passwordauthno.png from the Pictures directory in my home directory to the current directory.

\$ cp ~/Pictures/passwordauthno.png .

In the following example, I will be copying the images directory (and everything inside it) from the Downloads directory under home to the /tmp/ directory.

\$ cp -r ~/Downloads/images /tmp/
